Summary

Software and DevOps engineer with a career spanning defense, cybersecurity, and cloud systems. Leads Agile teams through full-lifecycle development—from requirements and architecture to CI/CD, testing, and deployment—producing reliable, mission-critical software. Skilled in object-oriented programming, verification/validation, and infrastructure as code. Veteran intelligence analyst with SCI eligibility and a track record of integrating software, hardware, and data systems for secure, high-availability operations.

Skills

Languages & Frameworks: Python, Django, FastAPI, TypeScript/JavaScript, React, Java

Architecture & DevOps: Docker, Terraform, ECS Fargate, GitHub Actions, AWS GovCloud, pre-commit, Git

Software Practices: Agile SDLC, Object-Oriented Design, CI/CD, Automated Testing, Code Review, WCAG / Section 508 Accessibility

Security & Observability: CloudTrail, CloudWatch, Checkmarx, Application Logging, Access Control, Compliance Evidence

Domain Knowledge: RF / SATCOM Systems, Dataflow Engineering, Secure Communications

Experience

IVA'AL Solutions / Cybersecurity and Infrastructure Security Agency (CISA) —

Software Engineer -> Promoted to Cloud DevOps Engineer – Remote | Oct 2022 – Sep 2025

- Developed and maintained Crossfeed (XFD), an attack-surface management and vulnerability correlation platform monitoring 11,000+ U.S. critical infrastructure organizations (Python, React, TypeScript, PostgreSQL).
- Implemented CI/CD pipelines and IaC with Terraform and GitHub Actions; enforced automated tests, code linting, and secure configuration at build time.
- Applied Agile software development practices, mentoring junior and mid-level developers through sprint planning, code reviews, and pair programming.
- Collaborated with multi-disciplinary engineering, security, and data-science teams to achieve Authority to Operate (ATO), generating reproducible compliance evidence and hardened builds.
- Led development of metrics dashboards and APIs providing real-time observability; integrated CloudTrail and CloudWatch for telemetry and fault analysis.
- Built accessibility into internal interfaces—Section 508 / WCAG-compliant dashboards with aria-labels and semantic markup supporting assistive tools such as screen readers.
- Automated workload orchestration with AWS Lambda and ECS Fargate, optimizing runtime costs and system uptime.

TechNow — Instructor – San Antonio, TX | Mar 2016 – Oct 2022

- Delivered cybersecurity and network engineering instruction with a 100% student certification rate in CompTIA Security+, Network+, and A+.
- Authored and maintained technical training modules on system hardening, secure configuration, and threat modeling.
- Mentored early-career engineers on best practices in software security and Agile collaboration.

US Army — Senior Intelligence Analyst – Fort Gordon / Fort Lewis / Overseas Field Site | Mar 2016 – Dec 2020

- Trained and mentored Soldiers providing 200+ hours of training in networking, RF wave theory, and data correlation, enabling scalable technical proficiency across the unit.
- Built the Battalion's first organic network administration capability by tutoring and certifying IT specialists in Security+, streamlining IT support and reducing ticket resolution times from weeks to days.
- Ensured legal and regulatory compliance as Intelligence Oversight Officer, auditing analysts' queries and safeguarding sensitive data.
- Automated recurring intelligence workflows with scripts, reducing each deployed analyst's workweek by 6 hours and improving operational efficiency.

US Army — SATCOMs / Security Manager – Yongsan, Republic of Korea (ROK) | Mar 2014 – Mar 2016

- Led Trojan Spirit SATCOM team, delivering resilient satellite communications for four joint US-ROK exercises across three DoD networks, ensuring secure, high-availability information sharing.
- Managed security governance for 400+ personnel and 12+ secure compartmented information facilities (SCIFs) by enforcing clearance protocols, physical access controls, and data retention standards, safeguarding sensitive facilities and records.
- Automated onboarding/offboarding workflows, reducing processing time of personnel by 20% and improving operational efficiency.

US Army — Collection Operator – Fort Lewis, WA / Overseas Field Site | Dec 2010 – Mar 2014

- Set up and maintained theater-level collection assets and Ka-band satellite communications, delivering 99.99% uptime in austere conditions.
- Planned and setup SCIF on remote base overseas, implementing strict physical security controls and achieving Department of Defense certification.
- Supervised Brigade intelligence shop of analysts and linguists, producing actionable analysis on high-value targets.

Education

Thomas Edison State University – Bachelor of Arts in Computer Science (Expected April 2026)

Codeup — Full-Stack Web Development (2022)

National Security Agency (NSA) — SIGINT Analytical Support to Military Operations (SASMO) (2019)

Certifications

CompTIA – SecurityX+, CySA+, Security+, Network+, A+

EC-Council – Certified Ethical Hacker

Security Clearance

Public Trust
